linker and the light chain variable region (VL) of the mouse 5T4 antibody. The trophoblast cell surface antigen defined by monoclonal antibody 5T4 is expressed at high levels on the cells of a wide variety of human tumours. The 5T4scFv.1 DNA sequence can be used to construct single-chain antibodies (see AAV80291) and scFv fusion constructs (see sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (MOI) the vector being capable of delivering the NOI and/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery expert its used to treat cancer, and may also used as a gene delivery expert its used to treat cancer, and may also used as a gene delivery experts.

The specification describes the use of a single chain antibody (ScFv), which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory diseases including arthritis, hypersensitivity, autoimmune diseases, cancers, central nervous system disorders including Parkinson's disease, periodontal diseases, cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diseases, gastrointestinal disorders, infections, diabetes, Helicobacter-related diseases, and other immune disorders. The present sequence encodes a 5T4 ScFv of the invention. The antibody comprises the VH and VL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of single chain antibody capable of recognizing a disease associated molecule for manufacturing a medicament for preventing and/or treating a disease condition associated with disease associated molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  from murine 574 monoclonal antibody, joined by a linker sequence

This sequence represents an example of a DNA encoding a secreted single chain antibody FV fragment, which is involved in transcellular chain antibody FV fragment can be fused to cocalisation. In this example, the antibody FV fragment can be fused to antigen. A secreted single chain antibody FV fragment can be fused to cytochrome P450 reductase (P450R) derivatives such as anchorless P450R (AAV4228F) or FV fragment (AAV4228B). This enables the fusion protein to be delivered to other cells where it is then transported to the nucleus. Many drugs' sites of action are in the nucleus, rather than the cytoplasm, where P450R normally functions. P450R or its derivatives can be used to activate prodrugs to their active form via reduction. Administration of a prodrug is useful where the active drug may be metabolised before it reaches its site of action or where the active drug is cytotoxic, e.g., anticancer drugs. Targetted delivery of such prodrug is cytotoxic, e.g., anticancer drugs. Targetted delivery of such prodrug cativators allows a reduction in dose of the prodrug, and thus of activators allows a reduction in dose of the prodrug, and thus of express them, are specifically used to treat tumours, inflammation, catherosclerosis and muscular dystrophy, but may also be used to treat many other conditions associated with hypoxia, isochaemia or hypoglycemia, or to conditions associated with hypoxia, isochaemia or hypoglycemia, or to deliver antibiotics, antivial agents analdeagosic, ansesthetics, anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AACCAGAAATTCAAGGACAAGGCCATATTAACTGTAGACAAGTCATCCACCACAGGCTAC 240

The invention provides a new prodrug activating agent that comprises: (i) a localization domain (LD; other than a tumor-selective antibody) and a prodrug activating domain (BD); (ii) at least one nucleic acid encoding a cytochrome P450 and under control of at least one constitutive or inducible expression control sequence or (iii) a modified hematopoietic stem cell (MHSC) containing at least one nucleic acid encoding a PAD and cunder control of elements as in (ii). The prodrug activating agent or under control of elements as in (ii). The prodrug activating agent or vectors that express them, are specifically used to treat tumors.

CC inflammation, atherosolarosis and muscular dystrophy, but may also be used to treat many other conditions, e.g. crebral malaria, rheumatoid arthritis, or conditions associated with hypoxia, hypoglycemia or strhing, or conditions associated with hypoxia, hypoglycemia or constitution and dispussing catherics, anti-inflammatories, antineoplastic agents and diagnostic agents. LD optimize activity of PAD, e.g. by delivering it to selected cannesthetics, nucleic acids encoding the agent may be expressed selectively in phypoxic cells. The present sequence represents the DNA encoding the single chain variable antibody fragment against the tumor antigen ST4 scPv). ST4 scPv is used in the construction of a fusion protein comprising ST4 scPv and a human P450 reductase derivative alP450R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TCCTGCAAGGCTTCTGGTTACTCATTCACTGGCTACTACATGCACTGGGTGAAGCAGAGC 120

This DNA sequence encodes a single chain antibody (Sab), termed 574Sabl (see AAW86003), comprising an scrv derived from murine monoclonal antibody 574 (see AAW86002) and the human gl constant region. It was constructed from cassettes comprising a translation initiation signal and signal peptide (see AAV80297), the sequence of the secreted portion of 574scrv.1, and the sequence of the human gl constant region genomic clone. The trophoblast cell surface antigen defined by 574 is expressed at high levels on the cells of a wide variety of human tumours. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (EDI), the vector being capable of delivering the NOI and/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery system for introducing at least I gene encoding a TIP (preferably a tumour binding protein) into a haematopoietic cell lineage

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This DNA sequence encodes B7-1.5T4.1 (see AAW86004), a fusion protein comprising the extracellular domain (amino acids 1-215) of human cost stimulatory molecule B7-1 joined via a flexible peptide linker to an scrv (see AAW86002) derived from murine 5T4 monoclonal antibody. The cDNA can be inserted into vector pCI to allow expression of the fusion protein in mammalian cells. The trophoblast cell surface antigen defined by 5T4 is expressed at high levels on the cells of a wide variety of human tumours. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interest (NOI) which encodes a protein of interest (POI), the sequence of interest (NOI) which encodes a protein of interest (POI), the vector being capable of delivering the NOI and/or POI to the tumour corrector being capable of delivering the NOI and/or POI to the tumour corrector cancer, and may also used as a gene delivery system for introducing at least 1 gene encoding a TIP (preferably a tumour binding protein) into a haematopoietic cell lineage. B7-1 is expected to bind specifically to CD28 and CTLA-4 present on human T-cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ATGATTACGAACTATGTTATGGACTACTGGGGTCAAGTAACCTCAGTCACGTCTCCTCA 1098

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1338
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1398
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ATGATTACGAACTATGTTATGGACTACTGGGGTCAAGTAACCTCGGTCACGTCTCCTCA 1098
                                                                                                                                          The specification describes the use of a single chain antibody (ScFv), which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory disease. The ScFv antibody is also useful for treating inflammatory disease, including arthritis, hypersensitivity, autoimmune disease, cancers, central nervous system disorders including Parkinson's disease, periodontal diseases, cardiopulmonary diseases, cardiovascular diseases, and other immune disorders. The present sequence encodes a B7-1.5T4.1 fusion protein. This comprises the N-terminus of the 5T4 SCFv is fused after amino acid 215 of human B7-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               420

This DNA sequence encodes a fusion protein comprising the extracellular domain of mouse co-stimulatory molecule B7-1 joined via a flexible peptide linker to an acry (see AAW86002) derived from murine 574 monoclonal antibody. The fusion can be used to construct a recombinant vector, e.g. retrovirus, lentivirus, adenovirus, poxvirus, vaccinia virus corbaculovirus, used for direct treatment of tumour patients. The trophoblast cell surface antigen defined by 574 is expressed at high levels on the cells of a wide variety of human tumours. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (ITP) and optionally a nucleotide sequence of interacting protein (ITP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (POI), the vector being capable of delivering the NOI and/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery system for introducing a least 1 gene encoding a TIP (preferably a tumour binding protein) into a haematopoietic cell lineage. B7-1 binds specifically to CD28 and CTLA-4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 GAGGICCAGCITCAGCAGICTGACCIGGIGAAGCCIGGGGCTICAGIGAAGAIA 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New vector encoding a tumour interacting protein for treating cancer - contains a desired nucleotide sequence and/or protein which recognises tumours, and is used as a gene delivery system to treat cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tumour interacting protein; cancer; gene therapy; vector; 5T4 antigen; monoclonal antibody; gingle chain antibody; scFv; mouse; B7-1;

The specification describes the use of a single chain antibody (ScFv), which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory diseases. The ScFv antibody is also useful for treating diseases, cancers, central nervous system discases including arthritis, hypersensitivity, autoimmune disease, periodontal diseases, cardiopulmonary diseases, cardiovascular diseases, pastrointestinal diseases, infections, diabetes, Helicobacterrelated diseases, and other immune disorders. The present sequence encodes a B7 link ScFv sequence. A human B7 sequence is linked to a ScFv of the invention
                                                                                                                                                                                              Use of single chain antibody capable of recognizing a disease associated molecule for manufacturing a medicament for preventing and/or treating a disease condition associated with disease associated molecule.

```
pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory diseases including arthritis, hypersensitivity, autoimmune diseases, cancers, central nervous system disorders including Parkinson's disease, periodontal diseases, cardiopulmonary diseases, cardiovascular diseases, inflatinal disorders, infections, diabetes, Helicobacterrelated diseases, and other immune disorders. The present sequence encodes an Ig-574 fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TCTGGTTACTCATTCACTGGCTACTACATGCACTGGGTGAAGCAGCCATGGAAAGAGC

                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                               This DNA sequence encodes a fusion protein comprising the human IgEl heavy constant region joined via a flexible peptide linker to an scPv (see AAW86002) derived from murine 574 monoclonal antibody. The fusion construct can be incorporated into a recombinant viral vector for use in gene therapy of cancer. The trophoblast cell surface antigen defined by 574 is expressed at high levels on the cells of a wide variety of human tumours. Binding of IgE to tumour cells should promote a strong histamine and hence inflammatory response and destruction of tumour cells. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (ITP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (POI), the vector being capable of delivering the NOI and/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo

MAb capable of binding to the gamma chain of the IL-2 receptor, and thus of blocking the IL-2 response, is produced by mouse hybridoma line GP-4 (FRRM BP-4640). DNA encoding the variable region of this MAb was expressed in B. coli, yielding FV(GP-4) with immumosuppressive activity. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        31 CTGGTGAAGCCTGGGGCTTCAGTGAAGATATCCTGCAAGGCTTCTGGTTACTCATTCACT

                                                                                                                                                                                                                                                                                                                                         ö
pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory diseases including arthritis, hypersensitivity, autoimmund diseases, cancers, central nervous system disorders including Parkinson's disease, periodontal diseases, cardiopulmonary diseases, cardiovascular diseases, astrontestinal disorders, infections, diabetes, Helicobacterrelated diseases, and other immune disorders. The present sequence encodes a ScFv of the invention linked to an IgE sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         200

ţ

Anti-DNA antibody which specifically binds DNA hairpin - useful develop prods. for diagnosis and treatment of disorders, e.g. glomerulonephritis or systemic lupus erythematosus.

WPI; 1997-011854/01.

Example; Fig 7; 102pp; English

Tokita S;

```
The invention relates to an antibody against the N terminus of glypican 3 (GPC3). The antiboduy can be used for causing cell disruption and can be uses as an anti-cancer agent. The present sequence represents a chimeric mouse-human antibody MIE07 heavy chain encoding DNA.
                                                                                                                                                                                                                                                                                                                                                                                                               31 CTGGTGAAGCCTGGGGCCTTCAGTGAAGATATCCTGCAAGGCTTCTGGTTACTCATTCACT 90

```

The present sequence encodes the heavy chain variable region of the anti-DNA monoclonal antibody (MAb) 7b3, which has a high affinity for single stranded DNA, how or no affinity for double stranded DNA and specifically binds a DNA hairpin. The MAb can be used diagnose disorders associated with the pathological complexation of DNA, e.g. inflammatory a Johnerullonephritis and systemic lupus erythematosus. It can also be used to generate reagents to soreen for pharmaceutical agents, and treat and/or prevent an above disorder. Calf thymus DNA was used to immunise a MRL-lpr mouse, spleen cells from which were then fused with Sp2/0 myeloma cells to give hybridomas producing the anti-DNA MAb. 7b3 was found to react strongly with poly(dT), poly(dG) and poly(dI), moderately with single stranded DNA and weakly with poly(G). (Updated on 27-AUG-2003 to

correct OS field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 906;
                                                                            Sequence 24, Application US/08656906
Patent No. 2972901
GENERAL INFORMATION:
APPLICANT: Ferkol Jr., Thomas W.
APPLICANT: Davis, Pamela B.
APPLICANT: Ziady, Assem-Galal
TITLE OF INVENTION: Serpin Enzyme Complex Receptor
TITLE OF INVENTION: Mediated Gene Transfer
NUMBER OF SEQUENCES: 31

This amino acid sequence comprises an scFv, termed 5T4scFv.1, comprising the heavy chain variable region (VH) from the murine 5T4 monoclonal antibody followed by a 15-amino acid flexible linker and the light chain variable region (VL) of the mouse 5T4 antibody. The trophoblast cell

New vector encoding a tumour interacting protein for treating cancer - contains a desired nucleotide sequence and/or protein which recognises tumours, and is used as a gene delivery system to treat cancer.

WPI; 1999-059910/05.

N-PSDB; AAV80290.

surface antigen defined by monoclonal antibody 5T4 is expressed at high (see AAV80200) can be used to construct single-chain antibodies (see AAV80200) can be used to construct single-chain antibodies (see AAW80003) and sefv fusion constructs (see AAW80004-05). The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (POI), the vector being capable of delivering the NOI and/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat canner, and may also used as a gene delivery system for introducing at least 1 gene encoding a TIP (preferably a tumour binding protein) into a haematopoietic cell lineage

This sequence represents an exempte or a secreted single chain antibody of tragment (in this case, directed against the 5T4 antigen), which is involved in transcellular localisation. A secreted single chain antibody of tragment can be fused to optochrome P450 reductase (P450R) derivatives cuch as anchorless P450R (A4742287) or FN fragment (AA742288). This cubbles the fusion protein to be delivered to other cells where it is chen transported to the nucleus. Many drugs' sites of action are in the nucleus, rather than the cytoplasm, where P450R normally functions. P450R or its derivatives can be used to activate prodrugs to their active form via reduction. Administration of a prodrug is useful where the active drug may be metabolised before it reaches its site of action or where the active drug is cytotoxic, e.g., anticancer drugs. Targetted delivery of such prodrug activators allows a reduction in dose of the prodrug, and thus of systems active effects. P450R derivative fusion proteins, or vectors that express them, are specifically used to treat tumours, are specifically used to treat tumours, and muscular dystrophy, but may also be used to read many other conditions, are specifically used to treat tumours, and cathuris, or conditions associated with hypoxia, ischaemia or theumatoid atheritis, or conditions associated with hypoxia, ischaemia or hypoglycemia, or to deliver antibiotics, antiviral agents, analgesics, anti-inflammatories, antineoplastic agents and diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 NÇKFKDKAILITVDKSSTTAYMELRSLISEDSAVYYCARSTMITNYVMDYWGQVTSVTVSS 120

                                                                                                                                                                                                                                                                                       The invention provides a new prodrug activating agent that comprises: (i) a localization domain (LD; other than a tumor-selective antibody) and a prodrug activating domain (RD); (ii) at least one nucleic acid encoding a cytochrome P450 and under control of at least one constitutive or inducible expression control sequence or (iii) a modified hematopoietic stem cell (MHSC) containing at least one nucleic acid encoding a PAD and under control of elements as in (ii). The prodrug activating agent or vectors that express them, are specifically used to treat tumors, inflammation, atherosclerosis and muscular dystrophy, but may also be used to treat many other conditions, e.g. crebral malaria, rheumatoid arthritis, or conditions associated with hypoxia, hypoglycemia or is deliver antibiotics, antivizal agents analgesis, anesthetics, anti-inflammatories, antinosplastic agents and diagnostic agents. LD optimize activity of PAD, e.g. by delivering it to selected ocations or by delivering it to neighboring cells (bystander effect), and allow a reduction in dose of prodrug, and thus of systemic side-frects. Nucleic acids encoding the agent may be expressed selectively in hypoxic cells. The present sequence represents the single chain variable antibody fragment against the tumor antigen 574 (574 scFv): 574 scFv is tuman P450 reductase derivative alP450R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

The specification describes the use of a single chain antibody (ScFv), which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a disease pharmaceutical composition, for in vivo imaging and/or for advant treatment of a disease. The ScFv antibody is also useful for treating inflammatory diseases including arthritis, hypersensitivity, autoimmune diseases, cancers, central nervous system disorders including Parkinson's disease, periodontal diseases, cardiopulmonary diseases, cardiopulmar diseases, cardiopulmonary diseases, cardiopulmar disparse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         diseases, gastrointestinal disorders, infections, diabetes, Helicobacter-
related diseases, and other immune disorders. The present sequence
represents a 514 ScFv of the invention. The antibody comprises the VH and
VL regions from murine 514 monoclonal antibody, joined by a linker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 NQKFKDKAILTVDKSSTTAYMELRSLTSEDSAVYYCARSTMITNYVMDYWGQVTSVTVSS 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Use of single chain antibody capable of recognizing a disease associated molecule for manufacturing a medicament for preventing and/or treating a disease condition associated with disease associated molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

The ScFV antibody is useful in the manufacture of a medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFV antibody is also useful for treating inflammatory diseases. The ScFV antibidis, hypersensitivity, autoimmune diseases, cancers, central nervous system disorders including Parkinson's disease, periodontal diseases, cardiovascular

5T4Sabl, comprising an scFv derived from murine monoclonal antibody 5T4 (see AAW86022) and the human gl constant region. CDNA (see AAV80221) encoding the Sab has been inserted into vector pCineo to allow expression in mammalian cells. The trophoblast cell surface antigen defined by 5T4 is expressed at high levels on the cells of a wide variety of human tumnours. The invention relates to a vector comprising a nucleotide sequence coding for a tumour interacting protein (TIP) and optionally a nucleotide sequence of interest (NOI) which encodes a protein of interest (POI), the vector being capable of delivering the NOI and/or POI to the tumour recognised by the TIP. Delivery can be in vivo or ex vivo. The vector is used to treat cancer, and may also used as a gene delivery system for introducing at least 1 gene encoding a TIP (preferably a tumour binding protein) into a haematopoietic cell lineage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240

This is the amino acid sequence of .B7-1.5T4.1, a fusion protein

comprising the extracellular domain (amino acids 1-215) of human co-
stimulatory molecule B7-1 joined via a flexible peptide linker to an scro
(see AAW86022) derived from murine 5T4 monoclonal antibody. B7-1.5T4.1

contact (see AAW86022) can be inserted into vector pCI to allow expression

of the fusion protein in mammalian cells. The trophoblast cell surface
antigen defined by 5T4 is expressed at high levels on the cells of a wide

variety of human tumours. The invention relates to a vector comprising a

nuclectide sequence coding for a tumour interacting protein (TIP) and

optionally a nucleotide sequence of interact (NOI) which encodes a

protein of interest (POI), the vector being capable of delivering the NOI

cor and/or The vector is used to treat cancer, and may also used as a

gene delivery system for introducing at least I gene encoding a TIP

(preferably a tumour binding protein) into a haematopoietic cell lineage.

Chreterably a tumour binding protein) into a haematopoietic cell lineage.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                      The specification describes the use of a single chain antibody (ScFv), which is capable of recognizing a disease associated molecule in the manufacture of a medicament for the prevention and treatment of a disease condition. The ScFv antibody is useful in the manufacture of a medicament, for affecting a disease in vivo, for preparing a pharmaceutical composition, for in vivo imaging and/or for adjuvant treatment of a disease. The ScFv antibody is also useful for treating inflammatory diseases including arthritis, hypersensitivity, autoimmune diseases, cancers, central nervous system diseases, cardiovascular diseases, cardiopulmonary diseases, cardiovascular diseases, and other immune disorders. Helicobacterrelated diseases, and other immune disorders. The present sequence represents a B7-1.574.1 fusion protein. This comprises the N-terminus of the 574 ScFv is fused after amino acid 215 of human B7-1

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The polypeptide is useful for trading cancer. The polypeptide is also useful for trading cancer. The polypeptide is also useful for trading polypeptide. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polymucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed profile and the printed profile and the printed and the pri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide; or the antibody that binds to this polypeptide. The purified polypeptide, or the antibody that binds to this useful for treating cancer. The polypeptide is also useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MRC-binding polypeptide. The polypeptides and polymentally useful for treating or preventing polymentally useful for treating or preventing implema, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expension that sequence does not appear in the printed cormat directly from WIPO at the wipo int/pub/published_pct_sequences

of the following amino acid substitutions to reduce seroreactivity whilst maintaining production levels and biological activity: R20G, N31T, S24G, R27K, K79E, K81E, K83S and D227S. SEA/E-120 was geneticially fused to the Fab moiety of the tumour reactive antibody 574. Substitutions were made in the 574 sequence to obtain higher yields: in the heavy chain, H41P, 844G, 169T and V113G; and in the light chain, F10S, T45K, 163S, F73L, T77S, L78V and L63A. An expression vector comprising DNA encoding the conjugate can be used to transform host cells for recombinant production of the conjugate. The conjugate is useful for treating cancer, including cancer of the lung, breast, colon, kidney, pancreas, ovary, stomach, The present sequence is a conjugate of a bacterial superantigen and an antibody moiety, and has been designed to target and destroy cancer cells. The bacterial superantigen is SEA/B-120 (see also ABS6855), which was derived from staphylococcal enterotoxin B (SEB) by the incorporation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                          intra- or extracellular domain of the poliovirus receptor (PVR) - also known as CD155 (cluster of differentiation 155). The molecules of the invention have the ability to modulate receptor mediated adhesion, trafficking and/or invasion behaviour of a cell expressing PVR. The molecules of the invention are useful for the prevention and/or treatment of proliferative disorders, cancer or metastasis. The molecules of the invention are also useful for identifying agents that can modulate PVR-mediated adhesion or invasion potential of cells. The present amino acid sequence represents a PVR-specific scFv protein of the invention.

This polypeptide comprises the bispecific tetravalent antibody BiTAbB7-24

"1G10H6. The molecule consists of 4 scFvs, i.e. 2 anti B7.1 scFvs and 2

"1G10H6. The molecule consists of 4 scFvs, i.e. 2 anti B7.1 scFvs and 2

"1G10H6. The molecules, each containing both an anti B7.1 and anti B7.2 scFv

"1G10H6. The molecules, each containing both an anti B7.1 and anti B7.2 scFv

"1G10H6. The anti-B7.1 and and anti-B7.2 scFv are linked using a charactarion domain (see AAMOG19), which drives the homodimentation of the molecule. DNA (see AAMOG19), which drives the homodimentation of the BITAb in transformed E. coli cells. The BITAD cross-links, and/or cross-reacts, with the costimulatory molecules B7.1 and B7.2 that are expressed on the membrane of professional antigen-

"The invention relates to such B7-binding molecules, methods activation. The invention relates to such B7-binding molecules, methods continent production, and their use for treating or preventing diseases

"The immune system, in particular graft rejection, graft versus host disease, allergy and autoimmune diseases (claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               384
